TEA FELLAS

Solution Concept Canvas

Phase 3 — Ideate · HDB TPO Product Workshop · July 2026

FACILITATOR REFERENCE
Model Answer — Phase 3

Tea Fellas Digital — Operational Excellence & Expansion Readiness

C1 — Conservative: Basic Digital ($25K) + AMK Food Centre ($80K)

PRODUCT VISION

"Tea Fellas will be the heartland tea shop that runs as smoothly as a chain, without losing its soul. By 2027, the digital order flow — from customer to kitchen to collection — will eliminate peak-hour chaos, delight loyal customers with speed and recognition, and give John and Darren the operational confidence to run two outlets simultaneously."

Designed for: Aunty Mary, Darren, Uncle John (operations) · Mrs Selva, Jacky (customer experience)

Customer & Stakeholder Needs

PROBLEM STATEMENT

Aunty Mary, Darren, and Uncle John feel **frustrated and stretched** about Tea Fellas' **fully paper-based, memory-dependent order fulfilment** and need to consistently deliver the right drink to the right customer at peak — but cannot because **there is no digital flow linking cashier, kitchen, and collection**, causing daily errors, chaotic collection, and an operational ceiling that prevents scaling.

SERVICE OPPORTUNITY & REACH

250 customers/day · Toa Payoh

150+ customers/day · AMK Year 1

~470 customers/day combined at Year 3

Segments: HDB residents, office commuters, morning workers, bulk-order staff (Jacky profile)

Scope: Mon–Fri 7:30am–8pm; AMK Food Centre adds all-day weekday coverage

CUSTOMER INSIGHTS & JTBD

Mary: Process orders accurately under pressure without re-doing mistakes
John: Match every drink to the right customer; plan Darren's independence
Darren: Prepare drinks without chit interruptions; run AMK outlet confidently
Mrs Selva: Order ahead, earn loyalty rewards digitally, skip the peak queue
Jacky: Pre-order for team; pick up 5-6 drinks with clear per-person labels

Product Value Proposition

PRODUCT OBJECTIVES (OKRS)

O1: Eliminate operational errors

O2: Improve customer convenience & loyalty

O3: Build scalable foundation for expansion

VALUE TO USERS

Operations (Mary, Darren, John)

Digital order flow removes paper errors; Darren no longer interrupted; John uses ticket numbers — no memory required

Customers (Selva, Jacky)

Pre-order and skip queue; digital loyalty (no lost cards); collection notification; per-person labelling

Business

Proven digital ops at Toa Payoh before AMK opens; BCR ~2.7x by Year 3

SUCCESS METRICS (KEY RESULTS)

→ Error rate: ~15% → <3% within 6 months of go-live
→ Chit interruptions to Darren: zero within 3 months
→ Peak-hour wait: 25 min → <10 min within 6 months
→ Digital loyalty members: 200+ within 3 months of launch
→ Toa Payoh stable on digital 6+ months before AMK opens
→ Darren independent as AMK manager within 12 months of opening
→ Combined Year 3 monthly surplus: ~$16,250 (BCR ~2.7x)

Execution & Roadmap

PRODUCT ROADMAP

Phase A · Month 1–3 · $25K

QR ordering · Kitchen display · Ticket system · Collection notification · Clear labelling

Phase B · Month 3–6

Digital loyalty · Reorder shortcuts · Bulk/team ordering (Jacky flow)

Phase C · Month 6–18 · +$80K

AMK Food Centre outlet · Darren as manager · Shared digital system · Inventory tracking

LAUNCH STRATEGY

Vendor: Select govt-approved F&B SaaS (IMDA-supported); require SLA + data export
Grant: Apply SME Go Digital — 30% offset, net digital cost ~$17,500
Go-live: 2-week parallel run (paper + digital); QR opt-in, counter as permanent fallback
Training: Mary, John, Darren, Salmiah — hands-on before go-live; Darren trains new AMK staff

RESOURCING & MANPOWER PLAN

Toa Payoh (existing team + digital tools):

- Mary: tablet order entry replaces handwriting; loyalty managed by system
- Darren: kitchen display replaces chits; continues signature drinks
- John: ticket-based collection; system handles notifications
- Salmiah: re-keying eliminated; re-scoped to digital quality checking

AMK Food Centre (new outlet):

- Darren as Outlet Manager (Month 12+)
- 2 new part-time baristas (trained before opening)
- John stays at Toa Payoh; systems run in parallel

Risk & Mitigation

TRENDS

→SG F&B digitalisation accelerating — IMDA SME Go Digital, CDG grants available
→QR ordering normalised post-COVID; widely accepted by Singaporean consumers
→Heartland loyalty apps rising — Kopitiam, FairPrice comparisons expected by regulars
→Ingredient costs rising (Lim Teck Seng); revenue uplift from digital offsets margin pressure
→AMK area: digitally-enabled F&B chains are comparators; first-mover advantage available

RISK IDENTIFICATION & MITIGATION

Risk	L	I	Mitigation
Staff resistance (Mary, John)	Med	Hi	Simplest possible interface; hands-on training before go-live; run parallel 2 weeks
$25K cost vs $4.1K/month surplus	Med	Hi	SME Go Digital grant (30% offset); vendor payment plan; defer Phase B if revenue uplift insufficient
Customers prefer counter over QR	Low	Med	QR is always opt-in; counter ordering remains as permanent fallback — no forced change
Vendor lock-in / poor SaaS support	Low	Hi	IMDA-approved vendor list; contractual SLA; require data export capability from Day 1
Darren not ready to run AMK independently	Low	Hi	6-month supervised prep period; milestone review before AMK opens; John on call
Accepted trade-off: Supply chain (#9) unresolved	Med	Med	C1 (A1) does not include inventory tracking or digital supplier ordering — consciously deferred to Year 2. Upgrade to A2 when cash flow supports it.
