

PRIMARY PROBLEM STATEMENT — FRONT-LINE OPERATIONS

MODEL ANSWER — PRIMARY STATEMENT

Aunty Mary, Darren, and Uncle John feel **frustrated and stretched** about Tea Fellas' **fully paper-based, memory-dependent order fulfilment process** and need to **consistently take, prepare, and deliver the right drink to the right customer — even during peak-hour pressure** — but cannot do so because **there is no digital flow linking the cashier, kitchen, and collection counter**, which causes **daily order errors, a chaotic collection experience, and a growing operational ceiling that prevents Tea Fellas from scaling with confidence**.

SECONDARY PROBLEM STATEMENT — CUSTOMER EXPERIENCE

MODEL ANSWER — SECONDARY STATEMENT

Regular customers like Mrs Selva and Jacky feel **resigned and occasionally frustrated** about Tea Fellas' **queue-only, cash-or-card, stamp-card loyalty model** and need to **order conveniently, track their loyalty, and collect their drinks without confusion** — but cannot do so because **Tea Fellas has no digital touchpoint for customers at any stage of the journey**, which means **loyal customers lose time, lose rewards, and occasionally receive the wrong order — eroding the personal service that makes Tea Fellas special**.

**Facilitator debrief note:** The two statements should feel like two sides of the same coin — the internal (operational) view and the external (customer) view of the same underlying failure. Strong participant answers will name both a specific person *and* a specific structural barrier. Watch for vague statements like "Tea Fellas has a technology problem" — push groups to name the human impact and the business consequence.
