

VISION STATEMENT

MODEL ANSWER — VISION STATEMENT

"Tea Fellas will be the heartland tea shop that runs as smoothly as a chain, without losing its soul. By equipping their team with simple, affordable digital tools — from order capture to kitchen to collection — Tea Fellas will eliminate the daily friction that costs them time, accuracy, and customer goodwill. A digitally-enabled Tea Fellas earns the right to grow: a second outlet, a loyal customer base that feels recognised, and an operation that Darren can run confidently without Uncle John looking over every cup."

Designed for:Aunty Mary, Darren, Uncle John (operations) · Mrs Selva, Jacky (customer experience)

WHAT "GOOD" LOOKS LIKE — 3 OUTCOME PILLARS

1. Operational Accuracy

Every order reaches the right customer with the right customisation, every time — even at peak-hour pressure. No more chit errors, memory-based mistakes, or wrong drinks at collection.

2. Customer Convenience

Regulars can pre-order, skip the queue, earn loyalty rewards digitally, and be notified when their drink is ready. Tea Fellas feels as modern as any other F&B digital service they use.

3. Scalable Foundation

The processes, systems, and team confidence are in place to open and run a second outlet without chaos. Darren can manage AMK independently within 12 months of opening.

WHAT THIS IS NOT — SCOPE CONSTRAINTS

✕ **Not about making Tea Fellas into a chain or losing its heartland charm.** The personal service and community connection John and Mary have built over 16 years is a competitive advantage, not something to digitise away.

✕ **Not about the most expensive solution.** Every feature must be financially justifiable against Tea Fellas' \$4,100 monthly net surplus. The right solution is the one the business can afford to sustain.

✕ **Not a technology project for its own sake.** Every feature must solve a real, evidenced pain point experienced by staff or customers — not a hypothetical future need. Darren's proposal already captures this discipline.

Facilitator debrief note: Strong participant visions will balance aspiration with constraint — they name the transformation *and* acknowledge Tea Fellas' financial reality. Watch for visions that are either too generic ("use tech to improve") or too ambitious ("scale to 5 outlets"). The model answer holds the tension: ambition (second outlet) grounded in sequence (fix operations first). The "What This Is NOT" section is a useful debrief trigger — ask groups what they deliberately ruled out and why.
