

VISION STATEMENT

A product vision describes the future state you are designing towards. It should be **aspirational but specific** — specific enough to Tea Fellas that it could not apply to any other business, and aspirational enough to inspire decisions 12–18 months out.

Tip: A good vision statement names the business, names what changes, and is specific enough to make a design choice. Avoid generic statements like "Tea Fellas will use technology to improve operations." Instead, name the transformation: what will Tea Fellas be able to do — or be — that it cannot today?

Vision Statement

In 1–3 sentences, describe where Tea Fellas will be in 2 years if your recommended solution succeeds. What will be true for the team? For customers? For the business?

Designed for:

Who are the primary users your vision is designed for? (Name the roles):

WHAT "GOOD" LOOKS LIKE — 3 OUTCOME PILLARS

Name 3 measurable or observable outcomes that would tell you the vision has been achieved. Be specific about what changes for whom.

PILLAR 1

Name this pillar and describe the outcome:

PILLAR 2

Name this pillar and describe the outcome:

PILLAR 3

Name this pillar and describe the outcome:

WHAT THIS IS NOT — SCOPE CONSTRAINTS

A clear vision also defines what it is *not* — the temptations and misinterpretations you want to rule out. List 2–3 things your recommended solution is explicitly NOT trying to do.
