

Model answer: 9 pain points placed by Severity (Y-axis) and Frequency (X-axis), with recommended actions.

Priority Matrix — Model Answer

PRIORITISED PAIN POINTS — MODEL ANSWER

Pri.	Pain Point	Severity	Frequency	Recommended Action
1	Handwriting errors → order mistakes	High	Daily	Digitise order entry — QR or tablet at counter
2	No pre-ordering → peak-hour queues	High	Every peak	Customer-facing digital ordering (QR / app)
3	Memory-based collection → wrong drinks	High	Daily	Kitchen display + numbered ticket system
4	Single barista bottleneck (Darren alone)	High	Every peak	Kitchen display reduces chit interruptions; longer term: backup barista
5	No customer notification system	Medium	Every peak	Collection notification (SMS or app) — part of digital solution
6	Paper loyalty stamp cards	Medium	Regular	Digital loyalty tied to ordering platform
7	Bulk order labelling confusion (Jacky)	Medium	Daily	Per-person labelling in digital order flow
8	Supply chain won't scale to second outlet	High	Structural	Requires A2 or C2 (full integrated digital includes inventory tracking + digital supplier ordering) — C1 accepts this as a Year 2 upgrade
9	No feedback mechanism	Medium	Ongoing	Simple in-app or post-order feedback prompt

"Pain points 1-4 share a single root cause: the absence of a digital order flow from cashier to kitchen to collection. Solving this one structural problem addresses four of the top five priorities simultaneously."
