

Use the 2x2 matrix to place each pain point from your research by **Severity to the business** (Y-axis) and **Frequency of occurrence** (X-axis). Then prioritise them in the table below with recommended actions.

Priority Matrix

Plan For

High Severity / Low Frequency

Fix First

High Severity / High Frequency

Monitor

Low Severity / Low Frequency

High

Low

← Frequency →

High

Key question: Is there a single root cause driving multiple "Fix First" pain points?

Prioritised Pain Points

Priority	Pain Point	Severity	Frequency	Recommended Action
1				
2				
3				
4				
5				
6				
7				
8				
9				

Look for a pattern: do your top priorities share a single root cause? If so, one well-designed intervention may address multiple pain points simultaneously.
