

C — Consolidate

Bring overlapping or duplicated steps into a single streamlined flow

A — Automate

Identify manual or repetitive steps that technology can take over

R — Reduce

Simplify steps that add friction but contribute limited value

E — Eliminate

Remove steps entirely that no longer serve a purpose with the new solution

CARE ANALYSIS — MODEL ANSWER

Current Process Step	Current State Problem	CARE Action	Recommendation
Customer states order verbally to Mary	Mary handwrites chit under pressure	A — Automate	Customer scans QR code and places order digitally — removes verbal handoff entirely
Mary writes chit; Salmiah re-keys into system	Double data entry — errors compound at every step	E — Eliminate	Digital order flows directly to kitchen system — Salmiah's re-keying step is fully removed
Salmiah prints sticker label from her keyed input	Manual label printing per order	A — Automate	Label prints automatically from digital order — no manual entry required
Darren reads sticker label + paper chit to prepare	Two sources of truth; unclear chits interrupt mid-flow	C — Consolidate	Single digital kitchen display shows all queued orders — one source, no paper confusion
John calls customer name from memory	Noisy, unreliable, wrong drink to wrong customer	A — Automate	Collection notification (SMS or app push) alerts customer — John only needs to confirm ticket
John matches drink to customer by memory	No physical tracking; relies on face recognition	A — Automate	Ticket number system: numbered receipt → numbered cup → easy, error-free match
Mary issues paper loyalty stamp cards	Cards lost, forgotten, no digital record	E — Eliminate	Replace paper stamp cards with digital loyalty tied to ordering platform (automatic, zero effort)
Mary manages loyalty redemption complaints manually	Frequent, time-consuming, customers argue	E — Eliminate	Digital system tracks stamps automatically — zero manual management needed
Jacky verbally recites 5-6 team orders at counter	Error-prone, slow, label confusion at collection	C — Consolidate	Bulk/team ordering via shared link — one submission, each drink labelled per team member

CARE SUMMARY

C

Consolidate (2)

- Unify paper chit + sticker into one digital kitchen display for Darren
- Merge bulk verbal orders into a single digital team-order flow for Jacky

A

Automate (4)

- Customer self-ordering via QR / web form
- Automatic label printing from digital order
- Collection notification when drink is ready
- Numbered ticket matching (cup to customer)

R

Reduce (1)

- Reduce manual handwriting load on Mary — move order entry to customer-side QR

E

Eliminate (3)

- Salmiah's manual re-keying step (order goes digital from source)
- Paper loyalty stamp cards entirely
- Mary's manual loyalty complaint management

"8 of 9 customer-facing process pain points can be addressed through CARE — and 6 of them are solved by a single digital order flow intervention (Scenario A1). Pain Point #9 (supply chain scalability — how John orders from Lim Teck Seng Trading) is a structural back-end gap that sits outside the A1 scope. Fully resolving it requires Scenario A2 (full integrated digital, which includes inventory tracking and digital supplier ordering). C1 accepts this gap as a deliberate Year 2 trade-off."
